

Dynapro MT2 (RT05)

Toughest wild-terrain off-road traction

Terrain wide tread design

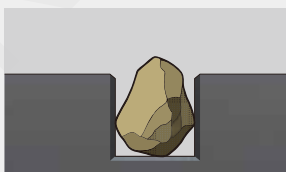

By our engineering 3D simulation, optimised the pattern design. Provide ultimate off-road traction while keeping on-road and quietness.

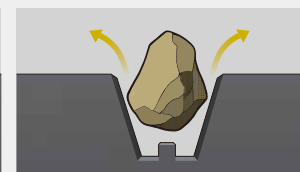

Mud and rock defender

Stone ejectors protect the tread grooves against stone drilling and puncturing. Also shed the mud and stones from the tread grooves to maximise the grip.

Conventional

Dynapro MT2

Sidewall bump protector

Series of bumper protector is designed to protect the sidewall area. Objects are deflected away to protect sidewall against penetration.

Connected shoulder tread

By connecting the tread and shoulder part, power through mud and soil condition and delivers improved high off-road traction.
