

UHP LS588

EQUIPPED FOR:

V, W, and Y Speed-Rated, we designed the **LS588 UHP** to complement today's high-performance automobiles. From luxury sports cars to modern muscle cars, the **LS588 UHP** is built to accentuate the highest levels of performance. Multiple staggered fitments make this the UHP tire of choice.

PERFORMANCE GROOVES

Designed for ultra-high performance handling, the long grooves and lateral grooves work together to give superior traction in cornering.

COMFORT AND QUALITY

The tread pitch width and alignment of the **LS588 UHP** are at optimum angles offering wind resistance and minimizing road noise.

DRY TRACTION SHOULDER

Large shoulder blocks help deliver excellent dry traction, steering and sport performance. A large area of tread contact with the road means optimized grip and heat dissipation.

WET-TRACTION SIPES

Hydroplaning is reduced with the specific placement of sipes and grooves that force water away from the tire surface, enhancing all-season performance.

UNIQUE LS SILICA COMPOUND

Specially-formulated **LS Silica Compound** adds performance by increasing flexibility in low temperatures and traction on wet surfaces, giving you more control. Reduced rolling resistance results in greater fuel efficiency.

M+S RATED

The **M+S** rating on the tire sidewall indicates engineering for better traction in the mud and snow.
