NOKIAN TYRES HAKKAPELIITTA® C4

STAINLESS WINTER GRIP

The new NOKIAN TYRES Hakkapeliitta® C4 studded tire masters all elements of winter. The state-of-the-art stainless-steel square stud ensures controlled handling and supreme grip on both ice and snow. The increased number of studs and computer optimized design ensure relentless winter grip, improved durability and maximized driving comfort for versatile van, delivery vehicle and RV use. The stainless-steel studs are corrosion resistant, so the tire can withstand salted road conditions while keeping the appearance stylish.

The new **stainless-steel stud** grips firmly and withstands wear as the kilometers add up. Safe winter grip is also helped by the increased number of studs and the various sipe depths and sizes on the tread blocks. The computer-optimized stud distribution also reduces rolling noise. The noise level remains comfortably low, which improves driving comfort.

Life is made easier for the hard-working professionals and travelers by balanced handling and top-class durability. The new tread model can safely overcome black ice, water, and slush. The tailored tread blocks and the firm, arrow-like tread design offer much-needed grip and stability when they are needed the most.

The **Aramid Sidewall technology** offers durability and protection for demanding driving conditions. The strong, synthetic Aramid fiber makes the tire more resistant to impacts and cuts that could otherwise easily break it. The added durability and safety provided by the Aramid Sidewalls helps drivers enjoy more carefree moments behind the wheel.

- Unique grip on ice and snow – stainless steel square studs offer grip and durability
- Precise, balanced, and stable even under heavy loads
- Better mileage, Aramid-reinforced sidewalls offer additional durability even for heavy-duty use
