NOKIAN TYRES HAKKAPELIITTA[®] CR4

STABLE HANDLING, COMFORTABLE QUIET

The stable and silent NOKIAN TYRES Hakkapeliitta[®] CR4 Nordic non-studded winter tire is the choice for van and RV drivers who want to feel safe and comfortable on both crowded urban streets and unplowed urban gravel roads. The comfortable handling is complemented by the low rolling resistance that reduces fuel consumption and carbon dioxide emissions.

The new Hakkapeliitta CR4 offers reliability and light rolling for snowstorms and sudden below-zero temperatures. The new **MultiTouch** tread design ensures first-class winter grip with precise and comfortable handling. The computer-optimized sipes on the various parts of the symmetrical tread pattern operate optimally in varying winter conditions. Excellent grip on snow and ice is further ensured by **Brake Boosters** and **Sipe Activators** in the tread blocks.

The **Center Block Siping** stiffens the tire's center section. The tread blocks are tied together with Groove Lifts, which ensures stability and safety in high-speed driving. The tread compound is tailored for versatile heavy-duty use and works safely across a wide temperature range. It also improves energy efficiency, resulting in improved mileage and smaller fuel bills.

The **Aramid reinforced sidewalls** offer unique protection against impacts, potholes and cuts. The core of the technology is the Aramid fiber included in the sidewall compound. The strong fiber stiffens and reinforces the sidewall to even better withstand external impacts and cuts, and may even prevent tire damage completely.

- Easy and reliable handling in any winter weather
- Silent, will carry even heavy loads while saving fuel
- Excellent wear resistance, Aramid reinforced sidewalls protect against impacts and cuts
