NOKIAN TYRES HAKKAPELIITTA® R5 EV

PURE SAFETY AND SILENCE

The new Hakkapeliitta R5 EV is a Nordic non-studded winter tire for passenger cars, crossovers and sport utility vehicles. Offering the purest form of safety, the new Hakkapeliitta R5 EV is an innovative combination of pure winter grip, silence and driving comfort. As a special introduction to the Hakkapeliitta product family, the new Hakkapeliitta R5 EV offers maximum comfort with ultimate safety for electric vehicles and hybrids.

The new Hakkapeliitta R5 EV offers impeccable grip, maximum driving comfort with green driving features specially designed for the northern winter. The new **Double Block Grip** design offers superior grip and handling, while the best-in-class ice performance is guaranteed by the unique **Arctic Grip Crystals**. The microscopic crystals are mixed in the tread compound and work like built-in studs, creating sharp, tough grip edges inside the rubber. As the tire wears down, the crystals emerge and activate a well-needed grip reserve.

The new Hakkapeliitta R5 EV has been designed to leave a smaller carbon footprint. The new, eco-friendly **Green Trace compound** offers safe and green driving with an ultra-low rolling resistance. To further extend the driving range, the compound has been specifically optimized for EV use.

A new feature for non-studded winter tires is the **SilentDrive™ Technology** which pushes driving comfort to the max. Exceptionally low sound levels are achieved by adding a layer of acoustic foam on the inner liner of the tire. The SilentDrive™ Technology is included in all Hakkapeliitta R5 EV sizes.

- Pure winter grip and balanced handling
- Eco-friendly mobility and increased range
- Ultra-low sound levels with SilentDrive™ technology
