CAR — WINTER — TOURING

1 WINTER DESIGN
The high level of traction promotes excellent mobility in snow and severe weather conditions.

2 WATER ESCAPE ACCELERATOR
The design includes water escape accelerators, that are intended to reduce hydroplaning risk and increase wet control by promoting water and slush expulsion.

3 MULTIACTIVE 4D SIPES
The multi-active sipes promote improved dry/wet braking control thanks to block stiffness when braking and flexibility in traction for additional snow retention.

4 NEW PROFILE AND MATERIALS
The square footprint area and regular pressure distribution are designed to maximize dry grip for improved dry handling and dry braking control.
