Fuel Saving

Tread Pattern technology

Benefit

- Better traction and noise
- Traction at slippery surface

1

Asymmetric pattern

Asymmetric pattern –3 rib design and In/Out shoulder block.

- WET ● Snow ● Low Noise

2

4 wide straight groove

4 Wide straight groove effects Wet and Hydroplaning.

- WET

Benefit

- Better wet and snow traction
- Better mileage

3

2-3D Combination Sipes

2D,3D Combination Sipes are good for traction and Mileage.

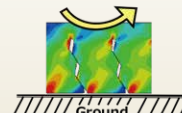

- WET ● Snow

2D sipe 3D sipe

4

3D sipes

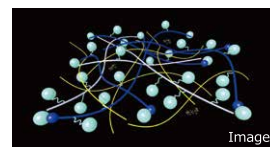

Compound Technology

Benefit

- Wet and Snow performance
- Low Rolling resistance

The feature of Tread compound is good performance balance wet and snow.

- Micro Silica Keeps stability at dry performance
- Silica End-locked polymer is not only improving silica dispersion for wet performance but also keeping compound soft for good snow performance. Additionally this polymer reduce energy loss of compound for Rolling Resistance.
